

Foam Eyeglasses Visor: (Full instructions)

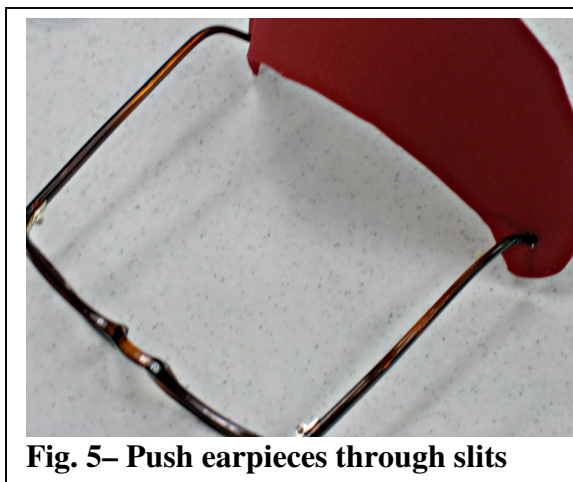

Take one visor cutout (**Figure 1**) and cut it out with scissors (**Figure 2**).

Fold the foam at each dot (**Figure 3**) and make a single small snip with scissors, thus making a small slit at each dot (**Figure 4**).

With the visor pointed away from the eyeglasses lenses, push each earpiece through a slit (**Figure 5**). Push the visor to the front of the glasses, turning it so that the visor faces towards the lenses. The visor should now be complete and should look like **Figure 6**.

Foam Visor

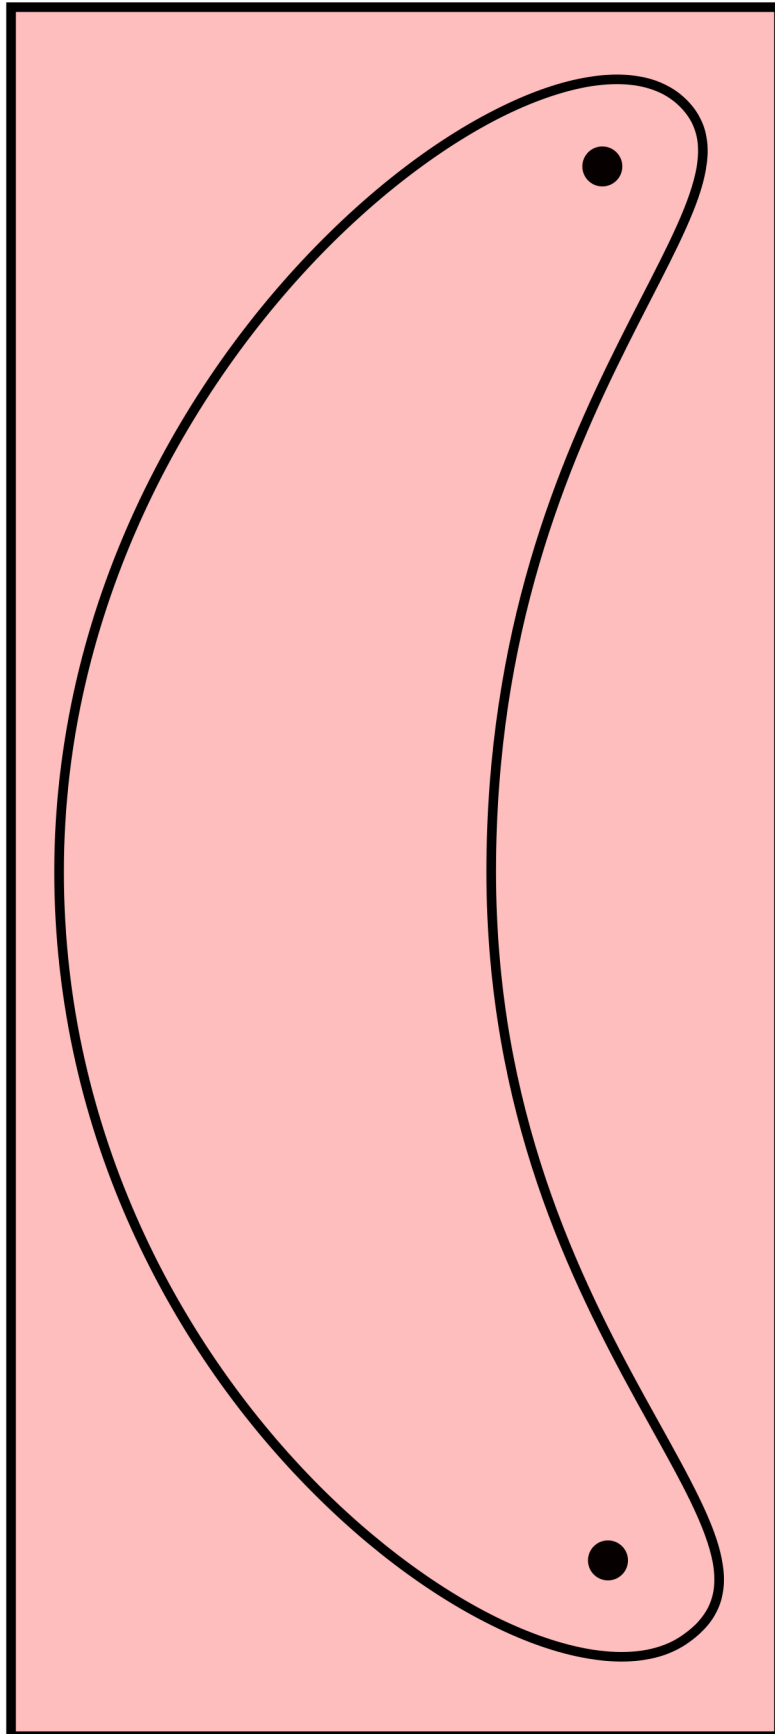

Directions:

Cut a 9"x4" rectangle out of a craft foam sheet.

Using the template to the left as a guide, cut the visor out of the foam.

Either slit the earpiece holes with scissors, or punch the holes with a hole punch.

Push glasses' earpieces through the holes and wear!

A 12"x18" sheet of craft foam will make six visors.
